

HICKORY - CLEAR

PREFINISHED BUCKEYE

APPEARANCE/COLOR: The heartwood is tan or reddish. The sapwood is white to cream, with fine brown lines. Heartwood and sapwood often are sharply demarcated. The color can vary significantly.

PHOTOSENSITIVITY: Low. Slightly ambers with age and exposure to prolonged sunlight and oxygen.

GRAIN: Ring-porous. The grain is closed, with moderate definition. The grain can be somewhat rough-textured.

HARDNESS (JANKA): Averages 1820 lbf

AVERAGE DRIED WEIGHT: 4.16 lbs per sq. ft.

SPECIFIC GRAVITY: Averages 0.72 (at 12% MC)

DIMENSIONAL STABILITY IN-USE: Below average.

INSTALLATION: Cuts, routs, planes, and shapes well, with only a slight dulling effect on cutting edges. The irregular grain can chip or tear when blades become dull. Can be somewhat brittle and has a tendency to split the tongues when nailing, but can be avoided when compressor psi is set appropriately. Glue adheres well, with no known issues.

SAND/FINISH: Sands satisfactorily when following the standard grit progression sequence. It may require a higher grit abrasive on the final passes than with other species to minimize visible scratches. Accepts stains and finishes very nicely, with no known concerns.

CLEAR GRADING RULES: Natural variations in heartwood and sapwood coloration, along with allowable natural wood characters. Will admit the following: Limited small light colored pin knots or bird pecks $\frac{1}{4}$ " in diameter, small burls, and thin light brown streaks. The back side will admit: Occasional scant thickness and or waney edge if piece has sufficient bearing of full thickness to support it to the floor.
