

# HICKORY - CLEAR

## PREFINISHED BREEZE

**APPEARANCE/COLOR:** The heartwood is tan or reddish. The sapwood is white to cream, with fine brown lines. Heartwood and sapwood often are sharply demarcated. The color can vary significantly.

**PHOTOSENSITIVITY:** Low. Slightly ambers with age and exposure to prolonged sunlight and oxygen.

**GRAIN:** Ring-porous. The grain is closed, with moderate definition. The grain can be somewhat rough-textured.

**HARDNESS (JANKA):** Averages 1820 lbf

**AVERAGE DRIED WEIGHT:** 4.16 lbs per sq. ft.

**SPECIFIC GRAVITY:** Averages 0.72 (at 12% MC)

**DIMENSIONAL STABILITY IN-USE:** Below average.

**INSTALLATION:** Cuts, routs, planes, and shapes well, with only a slight dulling effect on cutting edges. The irregular grain can chip or tear when blades become dull. Can be somewhat brittle and has a tendency to split the tongues when nailing, but can be avoided when compressor psi is set appropriately. Glue adheres well, with no known issues.

**SAND/FINISH:** Sands satisfactorily when following the standard grit progression sequence. It may require a higher grit abrasive on the final passes than with other species to minimize visible scratches. Accepts stains and finishes very nicely, with no known concerns.

**CLEAR GRADING RULES:** Natural variations in heartwood and sapwood coloration, along with some allowable natural wood characters. Will admit the following: Occasional pin knots (1/4" in diameter), small burls, streaks.
